SUBJECT INDEX

Volumes 11–20

Analytical microscopy

Mass determination of thin biological specimens using backscattered electrons; application in quantitative X-ray microanalysis on an automated STEM system, *Linders and Hagemann* 11 (1983) 13
Workshop on Surface Imaging and Analysis with High Spatial Resolution, Wickenburg Inn, AZ, 1983, Ed. *Krivanek* 11 (1983) 91
Analysis of surface structural defects using LEED and RHEED, *Lagally* 11 (1983) 103
STEM imaging and analysis of surfaces, *Cowley and Kang* 11 (1983) 131
Electron- and photon-stimulated desorption: benefits and pitfalls, *Madey, Doering, Bertel and Stockbauer* 11 (1983) 187
Work function measurements and their relation to modern surface analysis techniques, *Haas, Thomas, Shih and Marrian* 11 (1983) 199
Photo-electron emission microscopy of work function changes, *Bethge and Klaus* 11 (1983) 207
Final discussion session, Workshop on Surface Imaging and analysis with High Spatial Resolution, Wickenburg Inn, AZ, 1983, *Cowley* 11 (1983) 233
A transport equation theory of beam spreading in the electron microscope, *Rez* 12 (1983–84) 29
A comparison of ZAF-correction methods in quantitative X-ray microanalysis of light-element specimens, *Boekestein, Stadhouders, Stols and Roomans* 12 (1983–84) 65
Another expression for the minimum detectable mass in EELS, EPMA and AES, *Cazaux* 12 (1983–84) 83
Photoelectron microscopy of erythrocyte ghosts; imaging of lectin binding sites with colloidal gold markers, *Birrell, Rose and Griffith* 12 (1983–84) 213
Quantitative electron energy loss spectroscopy of vanadium carbide, *Allison, Williams and Hoffman* 13 (1984) 253
Combined CBED and HREM in the electron microscope, *Moodie and Whitfield* 13 (1984) 265
Combined CBED and HREM in a Philips EM400T analytical electron microscope, *Fung and Yang* 13 (1984) 333
Methods for specimen thickness determination in electron microscopy, *Berriman, Bryan, Freeman and Leonard* 13 (1984) 351
Aminoplastic standards for quantiative X-ray microanalysis of thin sections of plastic-embedded biological material, *Roos and Barnard* 15 (1984) 277
Concentration determination of embedded biological matter by scanning transmission electron microscopy, *Reichelt, Carlemalm, Villiger and Engel* 16 (1985) 69
Image force effects in electron microscopy, *Echenique and Howie* 16 (1985) 269
Signal/background ratio of ionization edges in EELS, *Cheng and Egerton* 16 (1985) 279
An analytical reflection and emission UHV surface electron microscope, *Telieps and Bauer* 17 (1985) 57
Semianalytical treatment of beam broadening in crystals, *Von Hugo, Kohl and Rose* 17 (1985) 303
Achievement of ultra-high resolution by 400 kV analytical atomic-resolution electron microscopy, *Hashimoto* 18 (1985) 19
The usefulness of a 400 kV high-resolution analytical electron microscope, *Bando, Matsui, Uemura, Oikawa, Suzuki, Honda and Harada* 18 (1985) 117
An illustrated review of various factors governing the high spatial resolution capabilities in EELS microanalysis, *Colliex* 18 (1985) 131
An experimental technique to measure X-ray production and detection efficiencies in the analytical electron microscope, *King* 18 (1985) 151
Mechanism of decomposition of dolomite, $Ca_{0.5}Mg_{0.5}CO_3$, in the electron microscope, *Cater and Buseck* 18 (1985) 241
The determination of Ti, Mn and Fe oxidation states in minerals by electron energy-loss spectroscopy, *Otten, Miner, Rask and Buseck* 18 (1985) 285
High-resolution microanalysis of semiconductor interfaces, *Krivanek and Liliental* 18 (1985) 355
Atomic structure and properties of small particles, ASU Workshop, January 1986, *Ed. Smith* 20 (1986) ix
Voidites in diamond – do they contain nitrogen? *Barry* 20 (1986) 169

Use of dynamic electron scattering for studying the position of oxygen atoms in simple metal oxide, *Guan, Hashimoto and Kuo* 20 (1986) 195
Some applications of electron microscopy in materials science, *Thomas* 20 (1986) 239
TEM and AES investigations of surface-diffusion-induced aging processes in thin Au films on Ag(111), *Meinel, Klaua and Bethge* 20 (1986) 261

Conventional electron microscopy

Quantitative evaluation of high-resolution features in images of negatively stained Tobacco Mosaic Virus, *Chang, Williams, Grano, Downing and Glaeser* 11 (1983) 3
Imaging of atomic steps on ultrathin Au films by TEM, *Klaua and Bethge* 11 (1983) 125
Trigonal catalase crystals: a new molecular packing assignment obtained from sections preserved with tannic acid, *Akey, Szalay and Edelstein* 13 (1984) 103
Towards an alignment of the actin molecule within the actin filament, *Smith, Fowler and Aebi* 13 (1984) 113
Improvement of the conventional TEM using the high current density magnetic electron lenses, *Podbrdský* 15 (1984) 9
TEM methods for the characterisation of fine metal multilayers, *Baxter and Stobbs* 16 (1985) 213
Five-fold symmetry in real and reciprocal spaces, *Ye, Wang and Kuo* 16 (1985) 273
Selected area low energy electron diffraction and microscopy, *Delong and Kolařik* 17 (1985) 67
Step contrast on ultrathin Au films investigated by TEM *Klaua and Bethge* 17 (1985) 73
Elemental imaging and resolution in energy-filtered conventional electron microscopy, *Shuman, Chang and Somlyo* 19 (1986) 121
On "parallel" illumination in the transmission electron microscope, *Christensen and Eades* 19 (1986) 191
Cation-diffusion-induced characteristic beam damage in transmission electron microscope images of micas, *Ahn, Peacor and Essene* 19 (1986) 375
The succession of generations of electron microscopists, *Schimmel* 20 (1986) 183
Some applications of electron microscopy in materials science, *Thomas* 20 (1986) 239

Cross-sections

Monte Carlo calculations of elastic and inelastic electron scattering in biological and plastic materials, *Reichelt and Engel* 13 (1984) 279
A simple Monte Carlo simulation of the electron-target interaction on the basis of an empirical scattering formula, *Werner and Heydenreich* 15 (1984) 17
Coherence in inelastic electron scattering, *Rossouw* 16 (1985) 241
A simple procedure for evaluating effective scattering cross-sections in STEM, *Kohl* 16 (1985) 265

Cryomicroscopy

Electron microscopy of the orthorhombic purple membrane at 4.2 K, *Studer, Gross, Müller and Stemmer* 11 (1983) 75
Temperature dependence of the critical electron exposure for hydrocarbon monolayers, *Downing* 11 (1983) 229
An improved transfer module and variable temperature control for a simple commercial cooling holder, *Perlov, Talmon and Falls* 11 (1983) 283
Construction details of a liquid helium cryostat for a superconducting objective and cold stage, *Lamvik, Worsham, Kopf and Robertson* 12 (1983–84) 79
A simple liquid-He-cooled specimen stage for an ultra-high resolution transmission electron microscope, *Gibson and McDonald* 12 (1983–84) 219
An evaluation of the cryo-sectioning of fixed and cryo-protected rat liver, *Leunissen, Elbers, Leunissen-Bijvelt and Verkleij* 12 (1983–84) 345
Preparation of frozen-hydrated specimens for high resolution electron microscopy, *Jaffe and Glaeser* 13 (1984) 373
Reactivity of free radicals at ambient and low temperatures, *Henglein* 14 (1984) 195
The morphology of ultrathin cryosections, *Zierold* 14 (1984) 201
Cryomicroscopy of liquid and semiliquid specimens: direct imaging versus replication, *Bachmann and Talmon* 14 (1984) 211
The interpretation of radiation damage measurements with electron diffraction of organic materials at very low temperatures, *Knapek, Formanek, Lefranc and Dietrich* 14 (1984) 253
Observations on ice layers, *Heide* 14 (1984) 271
Radiation damage to organic inclusions in ice, *Talmon* 14 (1984) 305
Cryomicroscopy and Radiation Damage II, Schloss Ringberg, 1983, Ed. *Zeitler* 14 (1984) 163
High resolution cryo electron microscopy of specifically stained specimens, *Knapek, Lefranc, Dietrich and Formanek* 15 (1984) 205
A comparison of an electron-beam-induced chemical reaction at $T = 10$ K and $T = 300$ K, *Pacansky, Maier and Fromm* 16 (1985) 81

The physical behavior of solid water at low temperatures and the embedding of electron microscopical specimens, *Heide and Zeitler* 16 (1985) 151
Structural changes in electron-irradiated paraffin crystals at < 15K and their relevance to lattice imaging experiments, *Dorset and Zemlin* 17 (1985) 229
A comparison of subcellular element concentrations in frozen-dried, plastic-embedded, dry-cut sections and frozen-dried cryosections, *Roos and Barnard* 17 (1985) 335
Can heat pipes solve the problems of drift and vibration of cryoholders? *Jakubowski* 17 (1985) 379
Projected structure of the surface protein of Deinococcus radiodurans determined to 8 Å resolution by cryomicroscopy, *Rachel, Jakubowski, Tietz, Hegerl and Baumeister* 20 (1986) 305
Megavolt and cryo electron microscopy of diamond knife edges, *Fernandez-Morán* 20 (1986) 317

Detectors, photographic and other

A new high-angle annular detector for STEM, *Pennycook and McMullan* 11 (1983) 315
A combined specimen-holder/detector for surface and transmission imaging of samples in a STEM/CTEM or SEM, *Valdrè Michelini and Sparrow* 15 (1984) 109
Secondary electron detection in the scanning transmission electron microscope, *Imeson, Milne, Berger and McMullan* 17 (1985) 243
Scanning X-ray radiography with an improved detection scheme, *Mouze, Cazaux and Thomas* 17 (1985) 269

Diffraction and optical diffraction

Guest editorial, Electron crystallography of "small" organic molecules, *Dorset* 11 (1983) 227
Reflection electron microscopy (REM) of fcc metals, *Hsu and Cowley* 11 (1983) 239
Electron crystallography of alkyl chain lipids; identification of long-chain packing, *Dorset* 12 (1983–84) 19
Pattern recognition techniques for the analysis of electron microdiffraction patterns, *Monosmith and Cowley* 12 (1983–84) 51
Zone axis pattern maps for 2H-$NbSe_2$ and 1T-VSe_2, *Silva and Riquelme* 12 (1983–84) 69
Electron microdiffration from very small gold particles, *Monosmith and Cowley* 12 (1983–84) 177
Large-angle convergent-beam zone axis patterns, *Fung* 12 (1983–84) 243
Summary of 1983 Symposium on Electron Crystallography of Macromolecules (reprinted from EMSA Journal), *Chiu* 13 (1984) iv
Symposium on Electron Crystallography of Macromolecules, EMSA, Phoenix, Arizona, August 1983, ed. *Beer* 13 (1984) 1
Electron crystallographic studies of DNA, *Downing* 13 (1984) 35
Selective contrast in electron microscopy of crystalline cytochrome oxidase, *Frey, Costello and Chan* 13 (1984) 85
Trigonal catalase crystals: a new molecular packing assignment obtained from sections preserved with tannic acid, *Akey, Szalay and Edelstein* 13 (1984) 103
Emergence of small defect contrast within HREM images of nonstoichiometric rutile, *Bursill, Shen Guang Jun, Smith and Blanchin* 13 (1984) 191
Dynamical electron scattering from negatively stained protein microcrystals, *Dorset* 13 (1984) 311
Electron diffraction of porous silicon, *Phillipp, Urban and Wilkens* 13 (1984) 379
Diffraction and microscopy studies of the atomic structure of grain boundaries, *Lamarre, Schmückle, Sickafus and Sass* 14 (1984) 11
Microdiffraction and STEM of interfaces, *Cowley* 14 (1984) 27
Aspects of electron diffraction from radiation-damaged crystals, *Van Dyck and Wilkens* 14 (1984) 237
Measurement and evaluation of electron diffraction patterns from two-dimensional crystals, *Baldwin and Henderson* 14 (1984) 319
Constrained least-squares fitting of the lattice lines in three-dimensional reconstruction of monolayer crystals, *Shaw* 14 (1984) 363
Demonstration of the phase distribution in an electron wave diffracted by monocrystal, *Möllenstedt, Stumpp and Lichte* 15 (1984) 1
The real space method for dynamic electron diffraction calculations in high resolution electron microscopy. I. Principles of the method, *Van Dyck and Coene* 15 (1984) 29
The real space method for dynamical electron diffraction calculations in high resolution electron microscopy. II. Critical analysis of the dependency on the input parameters, *Coene and Van Dyck* 15 (1984) 41
The real space method for dynamical electron diffraction calculations in high resolution electron microscopy. III. A computational algorithm for the electron propagation with its practical application, *Coene and Van Dyck* 15 (1984) 287
Nanodiffraction from platelet defects in diamond, *Cowley, Osman and Humble* 15 (1984) 311
Diffraction patterns from stained and unstained helices: consistency or contradiction? *Trus and Steven* 15 (1984) 325

Diffraction effects due to a single translation interface in a small crystal, *Van Dyck, Van Tendeloo and Amelinckx* 15 (1984) 357
Atomic step contrast from forbidden reflections, *Rossouw, Donnelly and Lynch* 16 (1985) 41
Use of two-dimensional single electron detector for electron diffraction studies in TEM, *Firmani, Salas, Henriquez, Ruiz, Gómez, Romeu, Pérez, Castaño, Schabes and Yacamán* 16 (1985) 89
Zone-axis patterns in reflection high-energy electron diffraction: a family of new techniques for surface characterization, *Shannon, Eades, Meichle and Turner* 16 (1985) 175
Mirror-symmetric and non-mirror-symmetric glide lanes in $CuAsSe_{1-x}S_x$. I. A convergent-beam electron diffraction study, *Goodman, Olsen and Whitfield* 16 (1985) 227
The use of array processors attached to minicomputers for multislice image calculations, *Rez* 16 (1985) 255
Five-fold symmetry in real and reciprocal spaces, *Ye, Wang and Kuo* 16 (1985) 273
Selected area low energy electron diffraction and microscopy, *Delong and Kolařik* 17 (1985) 67
Convergent-beam electron diffraction study of transverse stacking faults and dislocations, *Fung* 17 (1985) 81
Convergent-beam electron diffraction from faulted crystals of ZrS_3, *Gjønnes* 17 (1985) 133
Convergent-beam and small-area-parallel-beam electron diffraction of icosahedral quasicrystals of a meltquenched Al-Mn alloy, *Tanaka, Terauchi, Hiraga and Hirabayashi* 17 (1985) 279
The intersecting Kikuchi line technique; critical voltage at any voltage, *Tafto and Gjønnes* 17 (1985) 329
Symmetry differences observed between convergent-beam electron diffraction and double-rocking zone-axis patterns, *Caron and Schapink* 17 (1985) 383
High-resolution electron microscopy and microdiffraction, *Cowley* 18 (1985) 11
Bloch wave symmetries and inclined surfaces, Gjønnes and Gjønnes 18 (1985) 77
Effect of specimen thickness on symmetry determinations by convergent-beam electron diffraction, *Howe and Gronsky* 18 (1985) 83
Error bars in CBED symmetry? *Mansfield* 18 (1985) 91
Effect of antiphase domain boundaries on microdiffraction computer simulation, *Zhu, Ye and Cowley* 18 (1985) 111
Direct electron microscopic imaging of surface topography by diffraction and phase contrast, *Lehmpfuhl and Warble* 19 (1986) 135
Effect of elastic bend distortions on electron diffraction data from thin protein microcrystals, *Dorset* 19 (1986) 311
Fading of the Bragg spots in irradiated organic conductors: temperature and composition effects, *Zuppiroli, Housseau, Forro, Guillot and Pelissier* 19 (1986) 325
Computer simulation of diffraction contrast images and lattice fringe patterns of small hexagonal dislocation loops, *Hillebrand, Scheerschmidt and Heydenreich* 20 (1986) 279

Electron energy loss spectroscopy

Image formation by inelastically scattered electrons: image of a surface plasmon, *Kohl* 11 (1983) 53
On the measurement of surface step heights by low-loss imaging in STEM, *Treacy and Bellessa* 11 (1983) 173
Elementary surface excitations and electron energy loss spectroscopy, *Ibach* 11 (1983) 179
Electron energy loss spectroscopy in glancing reflection from bulk crystals, *Krivanek, Tanishiro, Takayanagi and Yagi* 11 (1983) 215
Surface plasmon scattering on flat surfaces at grazing incidence, *Batson* 11 (1983) 299
A performance test of the recovery of single energy loss profiles via matrix analysis, *Schattschneider* 11 (1983) 321
Another expression for the minimum detectable mass in EELS, *Cazaux* 12 (1983–84) 83
Scattering angle dependence of signal-background ratio of inner-shell electron excitation loss in EELS, *Oikawa, Hosoi, Inoue and Honda* 12 (1983–84) 223
Combined elemental and STEM imaging under computer control, *Leapman, Fiori, Gorlen, Gibson and Swyt* 12 (1983–84) 281
Detection of X-rays and electron energy loss events in time coincidence, *Kruit, Shuman and Somlyo* 13 (1984) 205
Quantitative electron energy loss spectroscopy of vanadium carbide, *Allison, Williams and Hoffman* 13 (1984) 253
Thickness dependence of signal/background ratio of inner-shell electron excitation loss in EELS, *Hosoi, Oikawa, Inoue and Kokubo* 13 (1984) 329
An investigation of electron energy loss spectroscopy used for composition analysis of crystalline and amorphous silicides, *Barbour, Mayer and Grunes* 14 (1984) 79
Assessment of electron irradiation damage to biomolecules by electron diffraction and electron energy-loss spectroscopy, *Misra and Egerton* 15 (1984) 337
How to remove multiple scattering from core-excitation spectra. I. Forward scattering, *Bradley, Wroge and Gibbons* 16 (1985) 95
Electron energy loss spectroscopy across a metal–insulator interface at sub-nanome-

ter spatial resolution, *Scheinfein, Muray and Isaacson* 16 (1985) 233
Coherence in inelastic electron scattering, *Rossouw* 16 (1985) 241
Image force effects in electron microscopy, *Echenique and Howie* 16 (1985) 269
Signal/background ratio of ionization edges in EELS, *Cheng and Egerton* 16 (1985) 279
Electron spectroscopy in the scanning electron microscope, *Seiler* 17 (1985) 1
Inner shell edge profile in electron energy loss spectroscopy, *Ahn and Rez* 17 (1985) 105
Elastic scattering in EELS - fundamental corrections to quantification, *Bourdillon and Stobbs* 17 (1985) 147
The influence of objective lens aberrations in energy loss spectrometry, *Kruit and Shuman* 17 (1985) 263
A single-stage process for quantifying electron energy loss spectra, *Steele, Titchmarsh, Chapman and Paterson* 17 (1985) 273
Prospects for high-resolution electron energy-loss experiments with the scanning transmission electron microscope, *Batson* 18 (1985) 125
An illustrated review of various factors governing the high spatial resolution capabilities in EELS microanalysis, *Colliex* 18 (1985) 131
The structural sensitivity of electron energy-loss near-edge structure (ELNES), *Spence* 18 (1985) 165
Light-element analysis with electrons and X-rays in a high-resolution STEM, *Thomas* 18 (1985) 173
Digital filters for application to data analysis in electron energy-loss spectrometry, *Zaluzec* 18 (1985) 185
The determination of Ti, Mn and Fe oxidation states in minerals by electron energy-loss spectroscopy, *Otten, Miner, Rask and Buseck* 18 (1985) 285
Elemental imaging and resolution in energy-filtered conventional electron microscopy, *Shuman, Chang and Somlyo* 19 (1986) 121
How to remove multiple scattering from core-excitation spectra. II. Non-zero scattering angles, *Bradley and Gibbons* 19 (1986) 317
High spatial resolution analysis using parallel detection EELS, *Disko and Shuman* 20 (1986) 43
Theoretical and experimental study of plasmon excitations in small metallic spheres, *Achèche, Colliex, Kohl, Nourtier and Trebbia* 20 (1986) 99

Electron probe microanalysis

Quantitative electron probe analysis: problems and solutions, *Kitazawa, Shuman and Somlyo* 11 (1983) 251
X-ray probe microanalyses and scanning X-ray microscopies, *Cazaux* 12 (1983–84) 321
Detection of X-rays and electron energy loss events in time coincidence, *Kruit, Shuman and Somlyo* 13 (1984) 205
A quantitative evaluation of degraded system resolution in an energy-dispersive X-ray spectrometer by activating the scanning coils in a (S)TEM, *Roos and Barnard* 15 (1984) 271
Direct observation of diffractive probe spreading, *Marks* 16 (1985) 261
Scanning X-ray radiography with an improved detection scheme, *Mouze, Cazaux and Thomas* 17 (1985) 269
An experimental technique to measure X-ray production and detection efficiencies in the analytical electron microscope, *King* 18 (1985) 151
Light-element analysis with electrons and X-rays in a high-resolution STEM, *Thomas* 18 (1985) 173
High-resolution microanalysis of semiconductor interfaces, *Krivanek and Liliental* 18 (1985) 355

High resolution

Quantitative evaluation of high-resolution features in images of negatively stained Tobacco Mosaic Virus, *Chang, Williams, Grano, Downing and Glaeser* 11 (1983) 3
Practical computation of amplitudes and phases in electron diffraction, *Self, O'Keefe, Buseck and Spargo* 11 (1983) 35
Electron microscopy of the orthorhombic purple membrane at 4.2 K, *Studer, Gross, Müller and Stemmer* 11 (1983) 75
Workshop on Surface Imaging and Analysis with High Spatial Resolution, Wickenburg Inn, AZ, 1983, Ed. *Krivanek* 11 (1983) 91
The importance of beam alignment and crystal tilt in high resolution electron microscopy, *Smith, Saxton, O'Keefe, Wood and Stobbs* 11 (1983) 263
Real space image simulation in high resolution electron microscopy, *Kilaas and Gronsky* 11 (1983) 289
Dispersive equations for high resolution imaging and lattice fringe artifacts, *Marks* 12 (1983–84) 237
High resolution images of a reconstructed surface structure on (111) gold platelets: interpretation and comparison with theoretical models, *Nihoul, Abdelmoula and Métois* 12 (1983–84) 353
Molecular structure determination of crystalline specimens in frozen aqueous solutions, *Milligan, Brisson and Unwin* 13 (1984) 1
A practical approach to the periodic continuation method for the simulation of high resolution TEM images of isolated crystal defects, *Matsuhata, Van Dyck, Van Landuyt and Amelinckx* 13 (1984) 343
High resolution electron microscopy of in-

terfaces between epitaxial thin films and semiconductors, *Gibson* 14 (1984) 1
HREM imaging and microanalysis of a III–V semiconductor/oxide interface, *Krivanek and Fortner* 14 (1984) 121
Estimates of validity of projection approximation for three-dimensional reconstructions at high resolution, *Cohen, Schmid and Chiu* 14 (1984) 219
Experimental high resolution electron microscopy evidence of a surface compound on bismuth (00.1) plane, *Abdelmoula, Renard and Nihoul* 14 (1984) 337
Bloch Wave HREM, *Marks* 14 (1984) 351
The real space method for dynamical electron diffraction calculations in high resolution electron microscopy. I. Principles of the method, *Van Dyck and Coene* 15 (1984) 29
The real space method for dynamical electron diffraction calculations in high resolution electron microscopy. II. Critical analysis of the dependency on the input parameters, *Coene and Van Dyck* 15 (1984) 41
High resolution electron microscopy in the study of semiconducting materials, *Hutchison* 15 (1984) 51
High resolution electron microscopy observations of precipitates in p-supersaturated silicon, *Armigliato and Werner* 15 (1984) 61
HREM investigation of highly strained inorganic glasses of different compositions, *Hopfe, Albrecht, Hillebrand, Pippel and Schmidt* 15 (1984) 71
High resolution imaging and interpretation of regular and irregular structures in n-niobium pentoxide crystal, *Uyeda, Fujiyoshi and Ishizuka* 15 (1984) 139
High resolution cryo electron microscopy of specifically stained specimens, *Knapek, Lefranc, Dietrich and Formanek* 15 (1984) 205
The real space method for dynamical electron diffraction calculations in high resolution electron microscopy. III. A computational algorithm for the electron propagation with its practical applications, *Coene and Van Dyck* 15 (1984) 287
HREM imaging conditions for stacking sequences in 18R martensite of Cu–Al alloys, *Lovey, Coene, Van Dyck, Van Tendeloo, Van Landuyt and Amelinckx* 15 (1984) 345
Improvement and application of the Fourier-transformed pattern from a small area of high resolution electron microscope images, *Tomita, Hashimoto, Ikuta, Endoh and Yokota* 16 (1985) 9
Non-anomalous high-resolution imaging of crystalline materials, *Smith, Bursill and Wood* 16 (1985) 19
Direct atomic imaging of solid surfaces. III. Small particles and extended Au surfaces, *Smith and Marks* 16 (1985) 101
Apodization in phase-contrast electron microscopy realized with hollow-cone illumination, *Kunath, Zemlin and Weiss* 16 (1985) 123
Quantitative analysis of image contrast in electron micrographs of beam-sensitive crystals, *Henderson and Glaeser* 16 (1985) 139
The effect of amorphous surface layers on images of crystals in high resolution transmission electron microscopy, *Kilaas and Gronsky* 16 (1985) 193
High resolution metal replication, quantified by image processing of periodic test specimens, *Gross, Müller, Wildhaber and Winkler* 16 (1985) 287
Step contrast on ultrathin Au films investigated by TEM, *Klaua and Bethge* 17 (1985) 73
Improved high resolution image processing of bright field electron micrographs. II. Experiment, *Kirkland, Siegel, Uyeda and Fujiyoshi* 17 (1985) 87
Auto-correlation analysis of high resolution electron micrographs of near-amorphous thin films, *Fan and Cowley* 17 (1985) 345
Computer simulation of HREM images of network models of SiO_2 glass, *Schmidt, Hillebrand, Albrecht, Neumann and Müller* 17 (1985) 357
High-resolution electron microscopy of disordered lithium ferrites, *Tanaka and Cowley* 17 (1985) 365
"Metallisation" of oxide surfaces observed by in situ high-resolution electron microscopy, *Smith and Bursill* 17 (1985) 387
The interpretation of HREM images of crystals, *Bursill* 18 (1985) 1
High-resolution electron microscopy and microdiffraction, *Cowley* 18 (1985) 11
Achievement of ultra-high resolution by 400 kV analytical atomic-resolution electron microscopy, *Hashimoto* 18 (1985) 19
Image localisation, *Marks* 18 (1985) 33
The determination of atomic positions in high-resolution electron micrographs, *Saxton and Smith* 18 (1985) 39
Interpreting high-resolution transmission electron micrographs, *Self, Glaisher and Spargo* 18 (1985) 49
Approaching atomic-resolution electron microscopy, *Smith, Camps, Freeman, O'Keefe, Saxton and Wood* 18 (1985) 63
Electron microscope studies of some inorganic and mineral oxide and sulphide systems, *Barbier, Hiraga, Otero-Diaz, White, Williams and Hyde* 18 (1985) 211
High-resolution electron microscopic studies

of chemical reactions in thin films, *Eyring, Dufner, Goral and Holladay* 18 (1985) 253
Time-resolved analysis of high-resolution electron microscope images, *Goral, Holladay and Eyring* 18 (1985) 275
Can nano-crystallites of germanium be structure-imaged? *Cesari, Charai and Nihoul* 18 (1985) 291
High-resolution electron microscopy studies of Ni silicides formed in lateral diffusion couples, *Chen, Elgat, Barbour, Zheng, Mayer and Carter* 18 (1985) 297
HREM of compound semiconductors, *De Cooman, Cho, Elgat and Carter* 18 (1985) 305
Aspects of HREM of tetrahedral semiconductors, *Glaisher and Spargo* 18 (1985) 323
Transition alumina structures studied using HREM, *Morrissey, Czanderna, Merrill and Carter* 18 (1985) 379
High-resolution studies of order and disorder in alloys, *Amelinckx, Van Tendeloo and Van Landuyt* 18 (1985) 395
Imaging small particles, *Marks* 18 (1985) 445
The future of high-resolution electron microscopy (summary of panel discussion), *Cowley* 18 (1985) 463
Proceedings of the Centennial Symposium on High-Resolution Electron Microscopy, January 1985, Tempe, AZ, Ed. *Buseck* 18 (1985)
Analysis of grain boundaries by HREM, *Elgat and Carter* 18 (1985) 313
Structure of purple membrane from Halobacterium halibium: recording, measurement and evaluation of electron micrographs at 3.5 Å resolution, *Henderson, Baldwin, Downing, Lepault and Zemlin* 19 (1986) 147
On "parallel" illumination in the transmission electron microscope, *Christensen and Eades* 19 (1986) 191
A striking high-resolution imaging phenomenon in NiMn, *Beale, Van Tendeloo and Amelinckx* 19 (1986) 201
The selective HREM imaging of sublattices of atoms in complicated structures, *Van Tendeloo, Van Dyck and Amelinckx* 19 (1986) 235
The structure of (100) defects in carbonated spatite crystallites: a high resolution electron microscope study, *Nelson, Wood, Barry and Featherstone* 19 (1986) 253
Radiation damage and structural studies: halogenated phthalocyanines, *Smith, Fryer and Camps* 19 (1986) 279
Atomic structure and properties of small particles, ASU Workshop, January 1986, *Ed. Smith* 20 (1986) ix
Characterization of Pt microcrystals using high resolution electron microscopy, *Long, Marzke, McKelvy and Glaunsinger* 20 (1986) 15
High spatial resolution analysis using parallel detection EELS, *Disko and Shuman* 20 (1986) 43
Atomic-resolution study of structural rearrangements in small platinum crystals, *Wallenberg, Bovin, Petford-Long and Smith* 20 (1986) 71
Electron holography approaching atomic resolution, *Lichte* 20 (1986) 293

High voltage

Adaptation of a high-voltage electron microscope for routine biological dark-field imaging, *Mannella and Ratkowski* 11 (1983) 21
High energy transmission electron diffraction and imaging studies of the silicon (111) 7 × 7 surface structure, *Spense* 11 (1983) 117
A HVEM for high resolution low-dose studies of biomacromolecules, *Pawley* 13 (1984) 387
Some applications of electron microscopy in materials science, *Thomas* 20 (1986) 239
Megavolt and cryo electron microscopy of diamond knife edges, *Fernandez-Morán* 20 (1986) 317

History

The succession of generations of electron microscopists, *Schimmel* 20 (1986) 183
Meanwhile, towards the end of the decade ..., *Hawkes* 20 (1986) 189
Some anecdotes around and with Colonel Ernst August Ruska, *Lambert* 20 (1986) 337

Image processing, 3D reconstruction

Real space image simulation in high resolution electron microscopy, *Kilaas and Gronsky* 11 (1983) 289
Stereographic representation of three-dimensional density distributions, *Van Heel* 11 (1983) 307
Pattern recognition techniques using a scanning transmission electron microscope, *Butler and Cowley* 12 (1983–84) 39
Pattern recognition techniques for the analysis of electron microdiffraction patterns, *Monosmith and Cowley* 12 (1983–84) 51
Electron microscopic visualization of the sidechains of the poly-L-lysine alpha helix, *Harauz, Andrews and Ottensmeyer* 12 (1983–84) 59
Sign conventions in electron diffractionand imaging, *Saxton, O'Keefe, Cockayne and Wilkens* 12 (1983–84) 75
Automatic selection of molecular images from electron micrographs, *Frank and Wagenknecht* 12 (1983–84) 169
Textural image processing on granular structures of metal shadowing replicas, *Lins* 12 (1983–84) 185
Inexact reconstruction from projections, *Crewe and Crewe* 12 (1983–84) 293

Direct three-dimensinal reconstruction for macromolecular complexes from electron micrographs, *Harauz and Ottensmeyer* 12 (1983–84) 309
Molecular structure determination of crystalline specimens in frozen aqueous solutions, *Milligan, Brisson and Unwin* 13 (1984) 1
Polarity of the 14-strand fibers of sickle cell hemoglobin determined by cross-correlation methods, *Crepeau and Edelstein* 13 (1984) 11
Experimental strategy in three-dimensional structure determination of crotoxin complex thin crystal, *Jeng and Chiu* 13 (1984) 27
Three-dimensional structure of bladder membrane protein, *Wade and Brisson* 13 (1984) 47
Three-dimensional reconstruction of imperfect two-dimensional crystals, *Saxton, Baumeister and Hahn* 13 (1984) 57
3D reconstruction from electron micrographs: its potential and practical limitations, *Engel and Massalski* 13 (1984) 71
Negative staining characteristics of arrays of mitochondrial pore protein: use of correspondence analysis to classify different staining patterns, *Mannella and Frank* 13 (1984) 93
Reconstructions of tubulin protofilaments: different appearances of the same structure, *Mandelkow, Schultheiss and Mandelkow* 13 (1984) 125
Computer image modeling of pentamer packing in polyoma virus "hexamer" tubes, *Baker and Casper* 13 (1984) 137
The role of multivariate image analysis in solving the architecture of the *Limulus polyphemus* hemocyanin molecule, *Frank* 13 (1984) 153
Multivariate statistical classification of noisy images (randomly oriented biological macromolecules), *Van Heel* 13 (1984) 165
Three-dimensional reconstruction of a periodic specimen from a single view of an oblique section, *Crowther* 13 (1984) 295
A practical approach to the periodic continuation method for the simulation of high resolution TEM images of isolated crystal defects, *Matsuhata, Van Dyck, Van Landuyt and Amelinckx* 13 (1984) 343
Inexact three-dimensional reconstruction of a biological macromolecule from a restricted from a restricted number of projections, *Crewe, Crewe and Kapp* 13 (1984) 365
Estimates of validity of projection approximation for three-dimensional reconstructions at high resolution, *Cohen, Schmid and Chiu* 14 (1984) 219
Measurement and evaluation of electron diffraction patterns from two-dimensional crystals, *Baldwin and Henderson* 14 (1984) 319
Constrained least-squares fitting of the lattice lines in three-dimensional reconstruction of monolayer crystals, *Shaw* 14 (1984) 363
Improved high resolution image processing of bright field electron micrographs. I. Theory, *Kirkland* 15 (1984) 151
Information transfer in transmission electron microscopy, *Rose* 15 (1984) 173
Improvement and application of the Fourier-transformed pattern from a small area of high resolution electron microscope images, *Tomita, Hashimoto, Ikuta, Endoh and Yokota* 16 (1985) 9
Inexact reconstruction: some improvements, *Crewe and Crewe* 16 (1985) 33
Digital image processing of multiple detector signals in scanning electron microscopy, *Niemietz and Reimer* 16 (1985) 161
Three-dimensional molecular shape determination from a limited number of projections, *Cusack and Jésior* 16 (1985) 203
Computer generation of shaded images of solids and surfaces, *Saxton* 16 (1985) 387
High resolution shadowing of freeze-dried bacterial photosynthetic membranes: multivariate statistical analysis and surface relief reconstruction, *Engelhardt, Guckenberger, Hegerl and Baumeister* 16 (1985) 395
Correlation of surface topography of metal-shadowed specimens with their negatively stained reconstructions, *Buhle, Aebi and Smith* 16 (1985) 436
Discussion at the EUREM 1984 Symposium on High Resolution Shadowing and Decoration: Image Analysis, *Saxton* 16 (1985) 451
Improved high resolution image processing of bright field electron micrographs. II. Experiment, *Kirkland, Siegel, Uyeda and Fujiyoshi* 17 (1985) 87
Use of nonlinear mapping in multivariate image analysis of molecule projections, *Radermacher and Frank* 17 (1985) 117
Pattern analysis of irregularly shaped particles, *Teichgraeber and Philipp* 17 (1985) 193
Three-dimensional reconstruction of the shape of human wart virus using spatial correlations, *Kam and Gafni* 17 (1985) 251
Auto-correlation analysis of high resolution electron micrographs of near-amorphous thin films, *Fan and Cowley* 17 (1985) 345
Computer simulation of HREM images of network models of SiO_2 glass, *Schmidt, Hillebrand, Albrecht, Neumann and Müller* 17 (1985) 357
Digital filters for application to data analysis in electron energy-loss spectrometry, *Zaluzec* 18 (1985) 185
Structure analysis by HREM with on-line and off-line image processing, *Kihlborg, Sundberg and Sävborg* 18 (1985) 191

Applications of real-time image processing for electron microscopy, *Krakow* 18 (1985) 197
Automatic selection of molecular images from dark field electron micrographs, *Andrews, Yu and Ottensmeyer* 19 (1986) 1
Three-dimensional reconstruction of a freeze-dried and metal-shadowed bacterial surface layer, *Wildhaber, Hegerl, Barth, Gross and Baumeister* 19 (1986) 57
Erratum to "Use of nonlinear mapping in multivariate image analysis of molecule projections", *Radermacher and Frank* 19 (1986) 75
Reconstruction from in-line electron holograms by digital processing, *Lin and Cowley* 19 (1986) 179
Image reconstruction using electron microdiffraction patterns from overlapping regions, *Konnert and D'Antonio* 19 (1986) 267
Odd men out: a quantitative objective procedure for identifying anomalous members of a set of noisy images of ostensibly identical specimens, *Unser, Steven and Trus* 19 (1986) 337
An algorithm for straightening images of curved filamentous structures, *Egelman* 19 (1986) 367
Criteria for the comparison of electron microscopical 3D reconstructions of individual particles, *Hoppe and Tietz* 20 (1986) 217
Electron holography approaching atomic resolution, *Lichte* 20 (1986) 293
Projected structure of the surface protein of Deinococcus radiodurans determined to 8 Å resolution by cryomicroscopy, *Rachel, Jakubowksi, Tietz, Hegerl and Baumeister* 20 (1986) 305

Imaging

Adaptation of a high-voltage electron microscope for routine biological dark-field imaging, *Mannella and Ratkowski* 11 (1983) 21
Practical computation of amplitudes and phases in electron diffraction, *Self, O'Keefe, Buseck and Spargo* 11 (1983) 35
Image formation by inelastically scattered electrons: image of a surface plasmon, *Kohl* 11 (1983) 53
Photoelectron microscopy of viruses, *Hole and Griffith* 11 (1983) 71
Workshop on Surface Imaging and Analysis with High Spatial Resolution, Wickenburg Inn, AZ, 1983, Ed. *Krivanek* 11 (1983) 91
High energy transmission electron diffraction and imaging studies of the silicon (111) 7×7 surface structure, *Spence* 11 (1983) 117
Imaging of atomic steps on ultrathin Au films by TEM, *Klaua and Bethge* 11 (1983) 125
STEM imaging and analysis of surfaces, *Cowley and Kang* 11 (1983) 131
On the measurment of surface step heights by low-loss imaging in STEM, *Treacy and Bellessa* 11 (1983) 173
Elemental classification in multi-detector STEM images using image analysis clustering techniques, *Savoji and Burge* 12 (1983–84) 1
Electron microscopic visualization of the sidechains of the poly-L-lysine alpha helix, *Harauz, Andrews and Ottensmeyer* 12 (1983–84) 59
Sign conventions in electron diffraction and imaging, *Saxton, O'Keefe, Cockayne and Wilkens* 12 (1983–84) 75
Polarity of the 14-strand fibers of sickle cell hemoglobin determined by cross-correlation methods, *Crepeau and Edelstein* 13 (1984) 11
Electron crystallographic studies of DNA, *Downing* 13 (1984) 35
Selective contrast in electron microscopy of crystalline cytochrome oxidase, *Frey, Costello and Chan* 13 (1984) 85
Emergence of small defect contrast within HREM image of nonstoichiometric rutile, *Bursill, Shen Guang Jun, Smith and Blanchin* 13 (1984) 191
Electron interferometry from voids in spinel, *DeCooman and Carter* 13 (1984) 233
Direct imaging of atomic steps in reflection electron microscopy, *Uchida, Jäger and Lehmpfuhl* 13 (1984) 325
HREM imaging conditions for stacking sequences in 18R martensite of Cu–Al alloys, *Lovey, Coene, Van Dyck, Van Tendeloo, Van Landuyt and Amelinckx* 15 (1984) 345
Preface to special issue from Symposium on Progress in Surface Analysis and Imaging, Budapest, 1984, *Bethge* 17 (1985) vii
Investigation of ultra-thin Ag films on Ni with the photoelectron emission microscope, *Bethge, Krajewski and Lichtenberger* 17 (1985) 21
Photoelectron imaging of cytoskeletal elements, *Nadakavukaren and Griffith* 17 (1985) 31
Prospects in high resolution X-ray photoelectron microscopy, *Cazaux* 17 (1985) 43
The resolution of the low-energy electron reflection microscope, *Bauer* 17 (1985) 51
Image synthesis in the electron microscope, *Bonhomme and Beorchia* 17 (1985) 127
Study of modulated structures by transmission electron microscopy, *Steeds, Bird, Eaglesham, McKernan, Vincent and Withers* 18 (1985) 97
Electron microscope studies of some inorganic and mineral oxide and sulphide systems, *Barbier, Hiraga, Otero-Diaz, White, Williams and Hyde* 18 (1985) 211
Electron microscopic studies of ferroelectric

crystals: detection of weak symmetry elements, *Bursill and Peng* 18 (1985) 235
Transition alumina structures studied using HREM, *Morrissey, Czanderna, Merrill and Carter* 18 (1985) 379
Surface profile imaging of spinel catalyst particles, *Hutchison and Briscoe* 18 (1985) 435
Observation of surface diffusion by biassed secondary electron imaging: the case of Ag/W(110), *Jones and Venables* 18 (1985) 439
Improvement in high resolution image quality of radiation-sensitive specimens achieved with reduced spot size of the electron beam, *Downing and Glaeser* 20 (1986) 269
Electron holography approaching atomic resolution, *Lichte* 20 (1986) 293
Measurement of axial geometrical aberrations of the probe-forming lens by means of the shadow image of fine particles, *Hanai, Hibino and Maruse* 20 (1986) 329

Instrumentation

Photo-electron emission microscopy of work function changes, *Bethge and Klaua* 11 (1983) 207
An improved transfer module and variable temperature control for a simple commercial cooling holder, *Perlov, Talmon and Falls* 11 (1983) 283
A new high-angle annular detector for STEM, *Pennycook and McMullan* 11 (1983) 315
Construction details of a liquid helium cryostat for a superconducting objective and cold stage, *Lamvik, Worsham, Kopf and Robertson* 12 (1983–84) 79
A simple liquid-He-cooled specimen stage for an ultra-high resolution transmission electron microscope, *Gibson and McDonald* 12 (1983–84) 219
In situ cleaving of crystals using shape-memory wires, *Hsu and Elibol* 12 (1983–84) 251
Photoelectron microscopy and photoelectron quantum yields of the fluorescent dyes fluorescein and rhodamine, *Griffith, Houle, Kongslie and Sukow* 12 (1983–84) 299
A cold stage for the Philips EM 300 electron microscope, *Taylor, Milligan, Raeburn and Unwin* 13 (1984) 185
Development of a 500 Å spatial resolution light microscope. I. Light is efficiently transmitted through $\lambda/16$ diameter apertures, *Lewis, Isaacson, Harootunian and Muray* 13 (1984) 227
On the suitability of the available cooling holders for low-dose work with the Philips EM400, *Booy and Van Bruggen* 13 (1984) 337
A combined specimen-holder/detector for surface and transmission imaging of samples in a STEM/CTEM or SEM, *Valdrè, Michelini and Sparrow* 15 (1984) 109
High brightness sources for electron and ion beam microscopy and micro-lithography, *Mair and Mulvey* 15 (1984) 255
Ion beam lithography, *Gamo and Namba* 15 (1984) 261
Use of two-dimensional single electron detector for electron diffraction studies in TEM, *Firmani, Salas, Henríquez, Ruiz, Gómez, Romeu, Pérez, Castaño, Schabes and Yacamán* 16 (1985) 89
Digital data acquisition, display and analysis of signals from surfaces, *Harland and Venables* 17 (1985) 9
Investigation of ultra-thin Ag films on Ni with the photoelectron emission microscope, *Bethge, Krajewski and Lichtenberger* 17 (1985) 21
Photoelectron imaging of cytoskeletal elements, *Nadakavukaren and Griffith* 17 (1985) 31
Prospects in high-resolution X-ray photoelectron microscopy, *Cazaux* 17 (1985) 43
The resolution of the low-energy electron reflection microscope, *Bauer* 17 (1985) 51
An analytical reflection and emission UHV surface electron microscope, *Telieps and Bauer* 17 (1985) 57
The influence of objective lens aberrations in energy-loss spectrometry, *Kruit and Shuman* 17 (1985) 263
Can heat pipes solve the problems of drift and vibration of cryoholders? *Jakubowski* 17 (1985) 379
High spatial resolution analysis using parallel detection EELS, *Disko and Shuman* 20 (1986) 43

Methods and techniques

Mass determination of thin biological specimens using backscattered electrons; application in quantitative X-ray microanalysis on an automated STEM system, *Linders and Hagemann* 11 (1983) 13
Adaptation of a high-voltage electron microscope for routine biological dark-field imaging, *Mannella and Ratkowski* 11 (1983) 21
Workshop on Surface Imaging and Analysis with High Spatial Resolution, Wickenburg Inn, AZ, 1983, Ed. *Krivanek* 11 (1983) 91
Surface imaging by scanning tunneling microscopy, *Binnig and Rohrer* 11 (1983) 157
The importance of beam alignment and crystal tilt in high resolution electron microscopy, *Smith, Saxton, O'Keefe, Wood and Stobbs* 11 (1983) 263
A novel sample preparation technique for cross-sectional TEM investigation of integrated circuits, *Vanhellemont, Bender,*

Claeys, Van Landuyt, Declerck, Amelinckx and Van Overstraeten 11 (1983) 303
Stereographic representation of three-dimensional density distributions, *Van Heel* 11 (1983) 307
A performance test of the recovery of single energy loss profiles via matrix analysis, *Schattschneider* 11 (1983) 321
Elemental classification in multi-detector STEM images using image analysis clustering techniques, *Savoji and Burge* 12 (1983–84) 1
Electron microscopy of tRNA crystals. I. Thin crystals negatively stained with uranyl acetate, *Fujiyoshi, Morikawa, Uyeda, Ozeki and Yamagishi* 12 (1983–84) 201
Scattering angle dependence of signal-background ratio of inner-shell electron excitation loss in EELS, *Oikawa, Hosoi, Inoue and Honda* 12 (1983–84) 223
A simplified method of electron microscope voltage measurement, *FitzGerald and Johnson* 12 (1983–84) 231
Production of central electrode of electron biprism using ion-beam thinning technique, *Ohshita, Teraoka and Tomita* 12 (1983–84) 247
In situ cleaving of crystals using shape-memory wires, *Hsu and Elibol* 12 (1983–84) 251
A simple method for the direct visualization of cell surface-associated lectins and antibodies in freeze fracture electron microscopy, *Kapsenberg, de Groot, Hogenes and Leene* 12 (1983–84) 253
Experimental strategy in three-dimensional structure determination of crotoxin complex thin crystal, *Jeng and Chiu* 13 (1984) 27
Three-dimensional reconstruction of imperfect two-dimensional crystals, *Saxton, Baumeister and Hahn* 13 (1984) 57
Negative staining characteristics of arrays of mitochondrial pore protein: use of correspondence analysis to classify different staining patterns, *Mannella and Frank* 13 (1984) 93
Computer image modeling of pentamer packing in polyoma virus "hexamer" tubes, *Baker and Caspar* 13 (1984) 137
Multivariate statistical classification of noisy images (randomly oriented biological macromolecules), *Van Heel* 13 (1984) 165
Detection of X-rays and electron energy loss events in time coincidence, *Kruit, Shuman and Somlyo* 13 (1984) 205
Time-resolved low-dose microscopy of glutamine synthetase, *Kunath, Weiss, Sack-Kongehl, Kessel and Zeitler* 13 (1984) 241
Combined CBED and HREM in the electron microscope, *Moodie and Whitfield* 13 (1984) 265
Combined CBED and HREM in a Philips EM400T analytical electron microscope, *Fung and Yang* 13 (1984) 333
Methods for specimen thickness determination in electron microscopy, *Berriman, Bryan, Freeman and Leonard* 13 (1984) 351
Preparation of frozen-hydrated specimens for high resolution electron microscopy, *Jaffe and Glaeser* 13 (1984) 373
A crystalline test specimen for checking the performance of high resolution electron microscopes, *Scholz and Heydenreich* 13 (1984) 407
Ion scattering analysis of interfaces, *Feldman* 14 (1984) 51
On the use of secondary ion mass spectrometry in semiconductor device materials and process development, *Magee* 14 (1984) 55
The depth resolution of sputter profiling, *King and Tsong* 14 (1984) 75
The further reduction of radiation damage in the electron microscope, *Fryer, McNee and Holland* 14 (1984) 357
A simple method for depositing thin films on the surface of transmission electron microscope specimens, *Boone* 14 (1984) 359
New possibilities of the electron microscopical determination of the morphology of polymers, *Michler* 15 (1984) 81
Beryllium decoration of monoatomic steps on monocrystalline cleavage surfaces, *Möllenstedt and Engelauf* 15 (1984) 131
Aminoplastic standards for quantiative X-ray microanalysis of thin sections of plastic-embedded biological material, *Roos and Barnard* 15 (1984) 277
Preparation of metal specimens for HREM by ultramicrotomy, *Timsit, Hutchison and Thornton* 15 (1984) 371
In situ high voltage TEM observation of an electrohydrodynamic (EHD) ion source, *Benassayag, Sudraud and Jouffrey* 16 (1985) 1
How to remove multiple scattering from core-excitation spectra. I. Forward scattering, *Bradley, Wroge and Gibbons* 16 (1985) 95
New experiences with ultramicrotomy in electron microscopic investigation of photochromic glasses, *Zörgiebel, Zeindl and Haase* 16 (1985) 115
Apodization in phase-contrast electron microscopy realized with hollow-cone illumination, *Kunath, Zemlin and Weiss* 16 (1985) 123
The physical behavior of solid water at low temperatures and the embedding of electron microscopical specimens, *Heide and Zeitler* 16 (1985) 151
Zone-axis patterns in reflection high-energy electron diffraction: a family of new techniques for surface characterization, *Shannon, Eades, Meichle and Turner* 16 (1985) 175
TEM methods for the characterisation of fine metal multilayers, *Baxter and Stobbs* 16 (1985) 213

Guest Editorial – EUREM 1984 Symposium on High Resolution Shadowing and Decoration: Image Analysis, *Baumeister* 16 (1985) 285
High resolution metal replication, quantified by image processing of periodic test specimens, *Gross, Müller, Wildhaber and Winkler* 16 (1985) 287
Decoration and shadowing of freeze-etched catalase crystals, *Bachmann, Becker, Leupold, Barth, Guckenberger and Baumeister* 16 (1985) 305
Comparative studies of very thin shadowing films produced by atom beam sputtering and electron beam evaporation, *Wildhaber, Gross and Moor* 16 (1985) 321
Decoration effects on the surface of a regular protein layer, *Winkler, Wildhaber and Gross* 16 (1985) 331
High resolution shadowing with pure carbon, *Müller, Gross, Winkler and Moor* 16 (1985) 340
New high resolution imaging methods as tools for the observation of small clusters, *Kunath and Gross* 16 (1985) 349
Surface reliefs derived from heavy-metal-shadowed specimens – Fourier space techniques applied to period objects, *Guckenberger* 16 (1985) 357
Considerations for the quantitative analysis of coated reliefs, *Chalcroft* 16 (1985) 371
Computer generation of shaded images of solids and surfaces, *Saxton* 16 (1985) 387
High resolution shadowing of freeze-dried bacterial photosynthetic membranes: multivariate statistical analysis and surface relief reconstruction, *Engelhardt, Guckenberger, Hegerl and Baumeister* 16 (1985) 395
The effects of air-drying and freeze-drying on the structure of a regular protein layer, *Wildhaber, Gross, Engel and Baumeister* 16 (1985) 411
Comparative electron microscopic studies of single biomolecules negatively stained and freeze-dried metal-shadowed, *Tesche and Schmiady* 16 (1985) 423
Correlation of surface topography of metal-shadowed specimens with their negatively stained reconstructions, *Buhle, Aebi and Smith* 16 (1985) 436
Discussion at the EUREM 1984 Symposium on High Resolution Shadowing and Decoration: Image Analysis, *Saxton* 16 (1985) 451
Digital data acquisition, display and analysis of signals from surfaces, *Harland and Venables* 17 (1985) 9
An analytical reflection and emission UHV surface electron microscope, *Telieps and Bauer* 17 (1985) 57
Use of nonlinear mapping in multivariate image analysis of molecule projections, *Radermacher and Frank* 17 (1985) 117
A determination of thickness and surface relief in reembedded sections of an epoxy- and a melamine-resin containing ferritin as size standard, *Frösch, Westphal and Bachhuber* 17 (1985) 141
Elastic scattering in EELS – fundamental corrections to quantification, *Bourdillon and Stobbs* 17 (1985) 147
Discrimination of heavy and light elements in a specimen by use of scanning transmission electron microscopy, *Andree, Mellema and Ruigrok* 17 (1985) 237
A single-stage process for quantifying energy-loss spectra, *Steele, Titchmarsh, Chapman and Paterson* 17 (1985) 273
The intersecting Kikuchi line technique; critical voltage at any voltage, *Tafto and Gjønnes* 17 (1985) 329
Symmetry differences observed between convergent-beam electron diffraction and double-rocking zone-axis patterns, *Caron and Schapink* 17 (1985) 383
Effect of specimen thickness on symmetry determination by convergent-beam electron diffraction, *Howe and Gronsky* 18 (1985) 83
Error bars in CBED symmetry? *Mansfield* 18 (1985) 91
Effect of antiphase domain boundaries on microdiffraction computer simulation, *Zhu, Ye and Cowley* 18 (1985) 111
Structure analysis by HREM with on-line and off-line image processing, *Kihlborg, Sundberg and Sävborg* 18 (1985) 191
Applications of real-time image processing for electron microscopy, *Krakow* 18 (1985) 197
Electron microscopic studies of ferroelectric crystals: detection of weak symmetry elements, *Bursill and Peng* 18 (1985) 235
High-resolution electron microscopic studies of chemical reactions in thin films, *Eyring, Dufner, Goral and Holladay* 18 (1985) 253
Time-resolved analysis of high-resolution electron microscope images, *Goral, Holladay and Eyring* 18 (1985) 275
TEM combined with $Al_xGa_{1-x}As$ marker layers as a technique for the study of GaAs MBE growth, *Mazur, Washburn, Fischer, Henderson, Klem, Masselink, Kopp and Morkoc* 18 (1985) 371
Observation of surface diffusion by biassed secondary electron imaging: the case of Ag/W(110), *Jones and Venables* 18 (1985) 439
Automatic selection of molecular images from dark field electron micrographs, *Andrews, Yu and Ottensmeyer* 19 (1986) 1
A theoretical study of the determination of

the depth of a dislocation by combined use of EBIC and CL technique, *Pasemann and Hergert* 19 (1986) 15
On the improved phase-grating method, *Kilaas* 19 (1986) 23
Cross-sectioning of layered thin films by ultramicrotomy, *Marshall and Dobbertin* 19 (1986) 69
Measurement of spherical aberration, beam tilt and image rotation in TEM with a focussed probe, *Vincent and Eades* 19 (1986) 195
Non-acid electrolyte thins many materials for TEM without causing hydride formation, *Kestel* 19 (1986) 205
Improved retention of precipitates in stainless steels during jet thinning for TEM, *Kestel* 19 (1986) 213
Improved electrolytes for thinning of vanadium and its alloys for TEM, *Kestel* 19 (1986) 299
How to remove multiple scattering from core-excitation spectra. II. Non-zero scattering angles, *Bradley and Gibbons* 19 (1986) 317
Methods for specimen thickness determination in electron microscopy. II. Changes in thickness with dose, *Berriman and Leonard* 19 (1986) 349
Fast charge-simulation procedure for determining the electron-optical properties of electrostatic systems, *Schönecker, Rose and Spehr* 20 (1986) 203
Measurement of axial geometrical aberrations of the probe-forming lens by means of the shadow image of fine particles, *Hanai, Hibino and Maruse* 20 (1986) 329

New developments

Photoelectron microscopy of viruses, *Houle and Griffith* 11 (1983) 71
Workshop on Surface Imaging and Analysis with High Spatial Resolution, Wickenburg Inn, AZ, 1983, Ed. *Krivanek* 11 (1983) 91
On the phase transition between the (7 × 7) and (1 × 1) structures of silicon (111) surface studied by reflection electron microscopy, *Tanishiro, Takayanagi and Yagi* 11 (1983) 95
Surface imaging by scanning tunneling microscopy, *Binnig and Rohrer* 11 (1983) 157
Direct visualization of unstained nucleic acids on a metal substrate, *Panitz* 11 (1983) 161
Photo-electron emission microscopy of work function changes, *Bethge and Klaua* 11 (1983) 207
Reflection electron microscopy (REM) of fcc metals, *Hsu and Cowley* 11 (1983) 239
Photoelectron microscopy and photoelectron quantum yields of the fluorescent dyes fluorescein and rhodamine, *Griffith, Houle, Kongslie and Sukow* 12 (1983–84) 299
Development of a 500 Å spatial resolution light microscope. I. Light is efficiently transmitted through λ/16 diameter apertures, *Lewis, Isaacson, Harootunian and Muray* 13 (1984) 227
Electron interferometry from voids in spinel, *DeCooman and Carter* 13 (1984) 233
Time-resolved low-dose microscopy of glutamine synthetase, *Kunath, Weiss, Sack-Kongehl, Kessel and Zeitler* 13 (1984) 241
Combined CBED and HREM in the electron microscope, *Moodie and Whitfield* 13 (1984) 265
Combined CBED and HREM in a Philips EM400T analytical electron microscope, *Fung and Yang* 13 (1984) 333
On the use of secondary ion mass spectrometry in semiconductor device materials and process development, *Magee* 14 (1984) 55
Bloch wave HREM, *Marks* 14 (1984) 351
Demonstration of the phase distribution in an electron wave diffracted by a monocrystal, *Möllenstedt, Stumpp and Lichte* 15 (1984) 1
Improvement of the conventional TEM using the high current density magnetic electron lenses, *Podbrdský* 15 (1984) 9
New possibilities of the electron microscopical determination of the morphology of polymers, *Michler* 15 (1984) 81
Observation of surface treatments on single crystals by reflection electron microscopy, *Uchida, Lehmpfuhl and Jäger* 15 (1984) 119
Surface analyses by low energy SEM in ultra high vacuum, *Ichinokawa and Ishikawa* 15 (1984) 193
High brightness sources for electron and ion beam microscopy and micro-lithography, *Mair and Mulvey* 15 (1984) 255
Ion beam lithography, *Gamo and Namba* 15 (1984) 261
In situ high voltage TEM observation of an electrohydrodynamic (EHD) ion source, *Benassayag, Sudraud and Jouffrey* 16 (1985) 1
The image contrast of surface steps in reflection electron microscopy, *Cowley and Peng* 16 (1985) 59
New experiences with ultramicrotomy in electron microscopic investigations of photochromic glasses, *Zörgiebel, Zeindl and Haase* 16 (1985) 115
Correlation of surface topography of metal-shadowed specimens with their negatively stained reconstructions, *Buhle, Aebi and Smith* 16 (1985) 436
Investigation of ultra-thin Ag films on Ni with the photoelectron emission microscope, *Bethge, Krajewski and Lichtenberger* 17 (1985) 21
Photoelectron imaging of cytoskeletal elements, *Nadakavukaren and Griffith* 17 (1985) 31
Prospects in high-resolution X-ray photoelectron microscopy, *Cazaux* 17 (1985) 43

The resolution of the low-energy electron reflection microscope, *Bauer* 17 (1985) 51
Microscopy of surfaces and applications to molecular beam epitaxy, *Petroff, Chen and Werder* 17 (1985) 185
Can heat pipes solve the problems of drift and vibration of cryoholders? *Jakubowski* 17 (1985) 379
A theoretical study of the determination of the depth of a dislocation by combined use of EBIC and CL technique, *Pasemann and Hergert* 19 (1986) 15
Three-dimensional reconstruction of a freeze-dried and metal-shadowed bacterial surface layer, *Wildhaber, Hegerl, Barth, Gross and Baumeister* 19 (1986) 57
Elemental imaging and resolution in energy-filtered conventional electron microscopy, *Shuman, Chang and Somlyo* 19 (1986) 121

Particle optics, experimental

Electron interferometry from voids in spinel, *DeCooman and Carter* 13 (1984) 233
Demonstration of the phase distribution in an electron wave diffracted by a monocrystal, *Möllenstedt, Stumpp and Lichte* 15 (1984) 1
Correction of the spherical aberration of the CTEM objective lens using a foil lens, *Kuzuya, Hibino and Maruse* 15 (1984) 233
The effect of non-isoplanatism in micrographs taken with an electron microscope equipped with a field emission gun, *Hanszen, Lauer and Ade* 16 (1985) 47
Measurement of spherical aberration, beam tilt and image rotation in TEM with a focussed probe, *Vincent and Eades* 19 (1986) 195
High performance two-electrode electron gun lenses; beyond the Butler gun, *Scheinfein* 19 (1986) 225

Particle optics, theory

Practical computation of amplitudes and phases in electron diffraction, *Self, O'Keefe, Buseck and Spargo* 11 (1983) 35
Image formation by inelastically scattered electrons: image of a surface plasmon, *Kohl* 11 (1983) 53
A simple Monte Carlo simulation of the electron–target interaction on the basis of an empirical scattering formula, *Werner and Heydenreich* 15 (1984) 17
The real space method for dynamical electron diffraction calculations in high resolution electron microscopy. I. Principles of the method, *Van Dyck and Coene* 15 (1984) 29
The real space method for dynamical electron diffraction calculations in high resolution electron microscopy. II. Critical analysis of the dependency on the input parameters, *Coene and Van Dyck* 15 (1984) 41
Improved high resolution image processing of bright field electron micrographs. I. Theory, *Kirkland* 15 (1984) 151
Information transfer in transmission electron microscopy, *Rose* 15 (1984) 173
A method for evaluating optical properties of electrostatic systems, *Ohiwa* 15 (1984) 221
A matrix demonstration of the relations between the asymptotic aberration coefficients of round lenses corresponding to different object positions, *Hawkes* 15 (1984) 227
Correction of the spherical aberration of the CTEM objective lens using a foil lens, *Kuzuya, Hibino and Maruse* 15 (1984) 233
Theoretical considerations on electron optical brightness for thermionic, field and T-F emissions, *Shimoyama and Maruse* 15 (1984) 239
The real space method for dynamical electron diffraction calculations in high resolution electron microscopy. III. A computational algorithm for the electron propagation with its practical applications, *Coene and Van Dyck* 15 (1984) 287
The use of array processors attached to minicomputers for multislice image calculations, *Rez* 16 (1985) 255
A simple procedure for evaluating effective scattering cross-sections in STEM, *Kohl* 16 (1985) 265
Image force effects in electron microscopy, *Echenique and Howie* 16 (1985) 269
Image synthesis in the electron microscopy, *Bonhomme and Beorchia* 17 (1985) 127
The influence of objective lens aberrations in energy-loss spectrometry, *Kruit and Shuman* 17 (1985) 263
Semianalytical treatment if beam broadening in crystals, *Von Hugo, Kohl and Rose* 17 (1985) 303
On "parallel" illumination in the transmission electron microscope. *Christensen and Eades* 19 (1986) 191
High performance two-electrode electron gun lenses; beyond the Butler gun, *Scheinfein* 19 (1986) 225
Meanwhile, towards the end of the decade ..., *Hawkes* 20 (1986) 189
Fast charge-simulation procedure for determining the electron-optical properties of electrostatic systems, *Schönecker, Rose and Spehr* 20 (1986) 203

Radiation damage and contamination

The reduction of radiation damage in the electron microscopy, *Fryer and Holland* 11 (1983) 67
Temperature dependence of the critical electron exposure for hydrocarbon monolayers, *Downing* 11 (1983) 229

Guest editorial: Radiation damage of organic materials in the transmission electron microscope (a personal view derived from experience with synthetic polymers), *Grubb* 12 (1983–84) 279
Time-resolved low-dose microscopy of glutamine synthetase, *Kunath, Weiss, Sack-Kongehl, Kessel and Zeitler* 13 (1984) 241
The "quasi-thermal" mechanism for electron beam damage of n-paraffins, *Dorset, Holland and Fryer* 13 (1984) 305
A HVEM for high resolution low-dose studies of biomacromolecules, *Pawley* 13 (1984) 387
The depth resolution of sputter profiling, *King and Tsong* 14 (1984) 75
Cryomicroscopy and Radiation Damage II, Schloss Ringberg, 1983, Ed. *Zeitler* 14 (1984) 163
A survey of microdosimetric quantities and concepts, *Kellerer* 14 (1984) 169
Electronically induced desorption: a specific localized radiation damage effect on surfaces, *Menzel* 14 (1984) 175
Free-radical probes of condensed-phase aspects of radiation damage mechanisms in DNA constituents: 5-halouracils, *Oloff, Riederer and Hüttermann* 14 (1984) 183
Reactivity of free radicals at ambient and low temperature, *Henglein* 14 (1984) 195
Radiation damage in organic crystalline films, *Fryer* 14 (1984) 227
Aspects of electron diffraction from radiation-damaged crystals, *Van Dyck and Wilkens* 14 (1984) 237
The interpretation of radiation damage measurements with electron diffraction of organic materials at very low temperatures, *Knapek, Formanek Lefranc and Dietrich* 14 (1984) 253
The temperature dependence of radiation damage in organic and biological and materials, *Wade* 14 (1984) 265
Electron beam damage of amorphous synthetic polymers, *Vesely* 14 (1984) 279
Methods of detection of radiation damage in electron microscopy, *Reimer* 14 (1984) 291
Radiation damage to organic inclusions in ice, *Talmon* 14 (1984) 305
The further reduction of radiation damage in the electron microscope, *Fryer, McNee and Holland* 14 (1984) 357
The relative stability of a mercury stain at room temperature and liquid helium temperature, *Lamvik, Weiss and Zeitler* 15 (1984) 215
Electron beam damage of behenic acid films, *Ohno* 15 (1984) 319
Assessment of electron irradiation damage to biomolecules by electron diffraction and electron energy-loss spectroscopy, *Misra and Egerton* 15 (1984) 337
A comparison of an electron-beam-induced chemical reaction at $T = 10$ K and $T = 300$ K, *Pacansky, Maier and Fromm* 16 (1985) 81
Quantitative analysis of image contrast in electron micrographs of beam-sensitive crystals, *Henderson and Glaeser* 16 (1985) 139
A TEM study of the electron-beam interaction with small supported palladium particles and alumina and titania substrates, *Heinemann and Poppa* 17 (1985) 213
Structural changes in electron-irradiated paraffin crystals at < 15K and their relevance to lattice imaging experiments, *Dorset and Zemlin* 17 (1985) 229
Mechanism of decomposition of dolomite, $Ca_{0.5}Mg_{0.5}CO_3$, in the electron microscope, *Cater and Buseck* 18 (1985) 241
Structure of purple membrane from Halobacterium halibium: recording, measurement and evaluation of electron micrographs at 3.5 Å resolution, *Henderson, Baldwin, Downing, Lepault and Zemlin* 19 (1986) 147
Radiation damage and structural studies: halogenated phthalocyanines, *Smith, Fryer and Camps* 19 (1986) 279
Fading of the Bragg spots in irradiated organic conductors: temperature and composition effects, *Zuppiroli, Housseau, Forro, Guillot and Pelissier* 19 (1986) 325
Methods for specimen thickness determination in electron microscopy. II. Changes in thickness with dose, *Berriman and Leonard* 19 (1986) 349
Cation-diffusion-induced characteristic beam damage in transmission electron microscope images of micas, *Ahn, Peacor and Essene* 19 (1986) 375
Improvement in high resolution image quality of radiation-sensitive specimens achieved with reduced spot size of the electron beam, *Downing and Glaeser* 20 (1986) 269

Scanning electron microscopy

UHV–SEM studies of surface processes: recent progress, *Venables, Spiller, Fathers, Harland and Hanbücken* 11 (1983) 149
X-ray probe microanalyses and scanning X-ray microscopies, *Cazaux* 12 (1983–84) 321
Scanning electron microscopy of the microtopography of a (111) silicon surface, *Katzer and Sáfrán* 15 (1984) 135
Surface analyses by low energy SEM in ultra high vacuum, *Ichinokawa and Ishikawa* 15 (1984) 193
Digital image processing of multiple detector

signals in scanning electron microscopy, *Niemietz and Reimer* 16 (1985) 161
Electron spectroscopy in the scanning electron microscope, *Seiler* 17 (1985) 1
Secondary electron detection in the scanning transmission electron microscope, *Imeson, Milne, Berger and McMullan* 17 (1985) 243
Observation of surface diffusion by biassed secondary electron imaging: the case of Ag/W(110), *Jones and Venables* 18 (1985) 439

Scanning transmission electron microscopy

Mass determination of thin biological specimens using backscattered electrons; application in quantitative X-ray microanalysis on an automated STEM system, *Linders and Hagemann* 11 (1983) 13
STEM imaging and analysis of surfaces, *Cowley and Kang* 11 (1983) 131
On the measurement of surface step heights by low-loss imaging in STEM, *Treacy and Bellessa* 11 (1983) 173
Pattern recognition techniques using a scanning transmission electron microscope, *Butler and Cowley* 12 (1983–84) 39
Combined elemental and STEM imaging under computer control, *Leapman, Fiori, Gorlen, Gibson and Swyt* 12 (1983–84) 281
Concentration determination of embedded biological matter by scanning transmission electron microscopy, *Reichelt, Carlemalm, Villiger and Engel* 16 (1985) 69
Discrimination of heavy and light elements in a specimen by use of scanning transmission electron microscopy, *Andree, Mellema and Ruigrok* 17 (1985) 237
Prospects for high-resolution electron energy-loss experiments with the scanning transmission electron microscope, *Batson* 18 (1985) 125
Calibration of the operating parameters for an HB5 STEM instrument, *Lin and Cowley* 19 (1986) 31
Contrast and resolution of scanning transmission electron microscope imaging modes, *Reichelt and Engel* 19 (1986) 43
Reconstruction from in-line electron holograms by digital processing, *Lin and Cowley* 19 (1986) 179
Recent applications of STEM to small particles, *Brown* 20 (1986) 39

Specimen preparation

A novel sample preparation technique for cross-sectional TEM investigation of integrated circuits, *Vanhellemont, Bender, Claeys, Van Landuyt, Declerck, Amelincks and Van Overstraeten* 11 (1983) 303
Specimen preparative methods for electron crystallography of soluble proteins, *Cohen, Jeng, Grant and Chiu* 13 (1984) 19
The relative stability of a mercury stain at room temperature and liquid helium temperature, *Lamvik, Weiss and Zeitler* 15 (1984) 215
Diffraction patterns from stained and unstained helices: consistency or contradiction? *Trus and Steven* 15 (1984) 325
Preparation of metal specimens for HREM by ultramicrotomy, *Timsit, Hutchison and Thornton* 15 (1984) 371
The physical behavior of solid water at low temperatures and the embedding of electron microscopical specimens, *Heide and Zeitler* 16 (1985) 151
Decoration and shadowing of freeze-etched catalase crystals, *Bachmann, Becker, Leupold, Barth, Guckenberger and Baumeister* 16 (1985) 305
Comparative studies of very thin shadowing films produced by atom beam sputtering and electron beam evaporation, *Wildhaber, Gross and Moor* 16 (1985) 321
The effects of air-drying and freeze-drying on the structure of a regular protein layer, *Wildhaber, Gross, Engel and Baumeister* 16 (1985) 411
Comparative electron microscopic studies of single biomolecules negatively stained and freeze-dried metal-shadowed, *Tesche and Schmiady* 16 (1985) 423
Cross-sectioning of layered thin films by ultramicrotomy, *Marshall and Dobbertin* 19 (1986) 69
Non-acid electrolyte thins many materials for TEM without causing hydride formation, *Kestel* 19 (1986) 205
Improved retention of precipitates in stainless steels during jet thinning for TEM, *Kestel* 19 (1986) 213
Improved electrolytes for thinning of vanadium and its alloys for TEM, *Kestel* 19 (1986) 299

Spectrometers, auxiliary apparatus

A quantiative evaluation of degraded system resolution in an energy-dispersive X-ray spectrometer by activating the scanning coils in a (S)TEM, *Roos and Barnard* 15 (1984) 271
Sub-1 eV resolution EELS at energy losses greater than 1 keV, *Krivanek, Manoubi and Colliex* 18 (1985) 155
Construction of an energy filter for 200 kV CTEM, *Oikawa, Ajika, Hashimoto, Kokubo and Yamaguchi* 18 (1985) 159

Surfaces, clusters, interfaces and particles

Image formulation by inelastically scattered electrons: image of a surface plasmon, *Kohl* 11 (1983) 53

Workshop on Surface Imaging and Analysis with High Spatial Resolution, Wickenburg Inn, AZ, 1983, Ed. *Krivanek* 11 (1983) 91

On the phase transition between the (7 × 7) and (1 × 1) structures of silicon (111) surface studied by reflection electron microscopy, *Tanishiro, Takayanagi and Yagi* 11 (1983) 95

Analysis of surface structural defects using LEED and RHEED, *Lagally* 11 (1983) 103

Surface studies with (clean) supported metal particles and clusters, *Poppa* 11 (1983) 105

High energy transmission electron diffraction and imaging studies of the silicon (111) 7 × 7 surface structure, *Spence* 11 (1983) 117

Imaging of atomic steps on ultrathin Au films by TEM, *Klaua and Bethge* 11 (1983) 125

STEM imaging and analysis of surfaces, *Cowley and Kang* 11 (1983) 131

Surface reactions and excitations, *Howie* 11 (1983) 141

UHV-SEM studies of surface processes: recent progress, *Venables, Spiller, Fathers, Harland and Hanbücken* 11 (1983) 149

Surface imaging by scanning tunneling microscopy, *Binnig and Rohrer* 11 (1983) 157

Reflection electron microscopy (REM) of vicinal surfaces of fcc metals, *Hsu* 11 (1983) 167

On the measurement of surface step heights by low-loss imaging in STEM, *Treacy and Bellessa* 11 (1983) 173

Elementary surface excitations and electron energy loss spectroscopy, *Ibach* 11 (1983) 179

Work function measurements and their relation to modern surface analysis techniques, *Haas, Thomas, Shih and Marrian* 11 (1983) 199

Final discussion session, Workshop on Surface imaging and analysis with high spatial resolution, 1983, *Cowley* 11 (1983) 223

Guest editorial, Electron crystallography of "small" organic molecules, *Dorset* 11 (1983) 227

Surface plasmon scattering on flat surfaces at grazing incidence, *Batson* 11 (1983) 299

Phenomenological in-situ TEM gas exposure studies of palladium particles on MgO at room temperature, *Heinemann, Osaka and Poppa* 12 (1983–84) 9

Electron microdiffraction from very small gold particles, *Monosmith and Cowley* 12 (1983–84) 177

Surface potential study of Au(111) surfaces, *Tan and Cowley* 12 (1983–84) 333

High resolution images of a reconstructed surface structure on (111) gold platelets: interpretation and comparison with theoretical models, *Nihoul, Abdelmoula and Métois* 12 (1983–84) 353

A structural basis for the carious dissolution of the apatite crystals of human tooth enamel, *Bress, Barry and Hutchison* 12 (1983–84) 367

Direct imaging of atomic steps in reflection electron microscopy, *Uchida, Jäger and Lehmpfuhl* 13 (1984) 325

The surface diffusion of silver under high resolution imaging conditions, *Lodge and Cowley* 13 (1984) 215

Atomic Scale Structure and Properties of Interfaces, Wickenburg, Arizona, 1984, Ed. *Krivanek* 14 (1984) 1

High resolution electron microscopy of interfaces between epitaxial thin films and semiconductors, *Gibson* 14 (1984) 1

Diffraction and microscopy studies of the atomic structure of grain boundaries, *Lamarre, Schmückle, Sickafus and Sass* 14 (1984) 11

Microdiffraction and STEM of interfaces *Cowley* 14 (1984) 27

Structure of grain boundaries in ceramics, *Rühle, Bischoff and David* 14 (1984) 37

Electron microscopy of interfacial dislocations, *Clark* 14 (1984) 47

Ion scattering analysis of interfaces, *Feldman* 14 (1984) 51

Resolving composition variations at interfaces by STEM, *Vander Sande, Garrat-Reed, Chiang and Thorvaldsson* 14 (1984) 65

Electronic structure and the properties of interfaces, *Harrison* 14 (1984) 85

Bonding geometries at semiconductor surfaces and interfaces, *Schluter* 14 (1984) 89

HREM of SiP precipitates at the (111) silicon surface during phosphorus predeposition, *Bourret and Schröter* 14 (1984) 97

Silicide/silicon interface bonding, *Rubloff* 14 (1984) 107

HREM imaging and microanalysis of a III–V semiconductor/oxide interface, *Krivanek and Fortner* 14 (1984) 121

Theory of Si/transition-metal silicide Schottky barriers, *Sankey, Allen and Dow* 14 (1984) 127

Grain boundary–solute interactions in polycrystalline silicon and germanium, *Smith, Grovenor, Batson and Wong* 14 (1984) 131

Electron microscopy study of the AuGe/Ni/Au contacts on GaAs and GaAlAs, *Liliental, Carpenter and Escher* 14 (1984) 135

The measurement of boundary displacements in metal, *Stobbs, Wood and Smith* 14 (1984) 145

On the study of the structure of grain boundaries in metals, *Balluffi* 14 (1984) 155

Experimental high resolution electron microscopy evidence of a surface compound on bismuth (00.1) plane, *Abdelmoula, Renard and Nihoul* 14 (1984) 337

The effect of elastic relaxation on the local structure of lattice-modulated thin films, *Gibson and Treacy* 14 (1984) 345
Bloch wave HREM, *Marks* 14 (1984) 351
In-situ UHV TEM study of the two-dimensional growth of Al_2Au phase on Al(111) surface, *Barna, Barna, Radnóczi and Sáfrán* 15 (1984) 101
Observation of surface treatments on single crystals by reflection electron microscopy, *Uchida, Lehmpfuhl and Jäger* 15 (1984) 119
Beryllium decoration of monoatomic steps on monocrystalline cleavage surfaces, *Möllenstedt and Engelauf* 15 (1984) 131
Scanning electron microscopy of the microtopography of a (111) silicon surface, *Katzer and Sáfrán* 15 (1984) 135
Surface analyses by low energy SEM in ultra high vacuum, *Ichinokawa and Ishikawa* 15 (1984) 193
Relationship between bulk structure and bounding surfaces in ZrO_2, *Warble* 15 (1984) 301
Nanodiffraction from platelet defects in diamond, *Cowley, Osman and Humble* 15 (1984) 311
HREM imaging conditions for stacking sequences in 18R martensite of Cu–Al alloys, *Lovey, Coene, Van Dyck, Van Tendeloo, Van Landuyt and Amelinckx* 15 (1984) 345
Diffraction effects due to a single translation interface in a small crystal, *Van Dyck, Van Tendeloo and Amelinckx* 15 (1984) 357
The image contrast of surface steps in reflection electron microscopy, *Cowley and Peng* 16 (1985) 59
Direct atomic imaging of solid surfaces. III. Small particles and extended Au surfaces, *Smith and Marks* 16 (1985) 101
The effect of amorphous surface layers on images of crystals in high resolution transmission electron microscopy, *Kilaas and Gronsky* 16 (1985) 193
Decoration effects on the surface of a regular protein layer, *Winkler, Wildhaber and Gross* 16 (1985) 331
New high resolution imaging methods as tools for the observation of small clusters, *Kunath and Gross* 16 (1985) 349
Surface reliefs derived from heavy-metal-shadowed specimens – Fourier space techniques applied to periodic objects, *Guckenberger* 16 (1985) 357
Considerations for the quantitative analysis of coated reliefs, *Chalcroft* 16 (1985) 371
Preface to special issue from Symposium on Progress in Surface Analysis and Imaging, Budapest, 1984, *Bethge* 17 (1985) vii
Digital data acquisition, display and analysis of signals from surfaces, *Harland and Venables* 17 (1985) 9
Investigation of ultra-thin Ag films on Ni with the photoelectron emission microscope, *Bethge, Krajewski and Lichtenberger* 17 (1985) 21
Photoelectron imaging of cytoskeletal elements, *Nadakavukaren and Griffith* 17 (1985) 31
Prospects in high-resolution X-ray photoelectron microscopy, *Cazaux* 17 (1985) 43
The resolution of the low-energy electron reflection microscope, *Bauer* 17 (1985) 51
An analytical reflection and emission UHV surface electron microscope, *Telieps and Bauer* 17 (1985) 57
Microscopy of surfaces and applications to molecular beam epitaxy, *Petroff, Chen and Werder* 17 (1985) 185
Formation and elimination of surface ion milling defects in cadmium telluride, zinc sulphide and zinc selenide, *Cullis, Chew and Hutchison* 17 (1985) 203
A TEM study of the electron-beam interaction with small supported palladium particles and alumina and titania substrates, *Heinemann and Poppa* 17 (1985) 213
Interactions of electron beams with surfaces of MgO crystals, *Tanji and Cowley* 17 (1985) 287
"Metallisation" of oxide surfaces observed by in situ high-resolution electron microscopy, *Smith and Bursill* 17 (1985) 387
High-resolution electron microscopy and microdiffraction, *Cowley* 18 (1985) 11
Bloch wave symmetries and inclined surfaces, *Gjonnes and Gjonnes* 18 (1985) 77
Tilt grain boundaries in NiO, *Merkle, Reddy and Wiley* 18 (1985) 281
Analysis of grain boundaries by HREM, *Elgat and Carter* 18 (1985) 313
HREM studies of coherent and incoherent interfaces in ZrO_2-containing ceramics: a preliminary account, *Heuer, Kraus-Lanteri, Labun, Lanteri and Mitchell* 18 (1985) 335
The accommodation of mismatch at epitaxial interfaces in semiconductors: some contributions from HREM, *Hutchison* 18 (1985) 349
TEM investigation of titanium-silicide Schottky contacts on GaAs, *Liliental, Kocot, Washburn and Gronsky* 18 (1985) 361
Examination of the Al/Al_2O_3 interface by high-resolution electron microscopy, *Timsit, Waddington, Humphreys and Hutchison* 18 (1985) 387
Twinned colloidal gold particles, *Dhere, De Angelis, Reucroft and Bentley* 18 (1985) 415
Study of early-stage precipitation in Al–4%Cu by microdiffraction and STEM, *Zhu and Cowley* 18 (1985) 419
Excitations at interfaces and small particles, *Howie and Milne* 18 (1985) 427

Surface profile imaging of spinel catalyst particles, *Hutchison and Briscoe* 18 (1985) 435
Imaging small particles, *Marks* 18 (1985) 445
Reflection electron microscope study of the initial stages of oxidation of Si(111)-7 × 7 surfaces, *Shimizu, Tanishiro, Kobayashi, Takayanagi and Yagi* 18 (1985) 453
Three-dimensional reconstruction of a freeze-dried and metal-shadowed bacterial surface layer, *Wildhaber, Hegerl, Barth, Gross and Baumeister* 19 (1986) 57
Direct electron microscopic imaging of surface topography by diffraction and phase contrast, *Lehmpfuhl and Warble* 19 (1986) 135
Defocussed dark-field images of crystal surfaces, *Cowley and Wang* 19 (1986) 217
Atomic structure and properties of small particles, ASU Workshop, January 1986, *Ed. Smith* 20 (1986) ix
On the detection and size classification of nanometer-size metal particles on amorphous substrates, *Heinemann and Soria* 20 (1986) 1
Characterization of Pt microcrystals using high resolution electron microscopy, *Long, Marzke, McKelvy and Glaunsinger* 20 (1986) 15
The surface structure of Pt crystallites supported on carbon black, *Sattler and Ross* 20 (1986) 21
Experiments with fine-particle beams, *Uyeda* 20 (1986) 29
Structure of catalytic particles, *Sanders* 20 (1986) 33
Recent applications of STEM to small particles, *Brown* 20 (1986) 39
Ab initio studies of the electronic structure of micro-clusters, *Rao, Khanna and Jena* 20 (1986) 51
Clusters in beams, *Sattler* 20 (1986) 55
About the stability and structure of metallic clusters produced by a LMIS, *Joyes, Van de Walle and Colliex* 20 (1986) 65
Atomic-resolution study of structural rearrangements in small platinum crystals, *Wallenberg, Bovin, Petford-Long and Smith* 20 (1986) 71
Quasi-melting of small particles, *Marks, Ajayan and Dundurs* 20 (1986) 77
Spectroscopic studies of metal clusters: absorption and resonance Raman spectroscopy of $ZrNb_2$, *Moskovits and Limm* 20 (1986) 83
Determination of the anisotropy of surface free energy of fine metal particles, *Menon and Martin* 20 (1986) 93
Theoretical and experimental study of plasmon excitations in small metallic spheres, *Achèche, Colliex, Kohl, Nourtier and Trebbia* 20 (1986) 99
Small particles in the field of industrial supported catalysts, *Freund, Lynch and Szymanski* 20 (1986) 107
Digital X-ray imaging of small particles, *Lyman* 20 (1986) 119
Atomic and electronic structure and chemical reactivity of metal clusters, *Boudart, Samant and Ryoo* 20 (1986) 125
Morphology and crystal face specificity of catalysis on small particles, *Sachtler* 20 (1986) 135
The low-rate growth of particulate Fe on planar alumina supports, *Poppa, Papageorgopoulos and Bauer* 20 (1986) 145
In-situ electron-beam-induced reduction of CuO; a study of phase transformations in cupric oxide, *Long and Petford-Long* 20 (1986) 151
The relaxation rate of muonium as a function of temperature and loading in silica-supported platinum catalysis, *Marzke, Harshman, Ansaldo, Keitel, Senba, Noakes and Brewer* 20 (1986) 161
Use of dynamic electron scattering for studying the position of oxygen atoms in simple metal oxide, *Guan, Hashimoto and Kuo* 20 (1986) 195
TEM and AES investigations of surface-diffusion-induced aging processes in thin Au films on Ag(111), *Meinel, Klaua and Bethge* 20 (1986) 261
Projected structure of the surface protein of Deinococcus radiodurans determined to 8 Å resolution by cryomicroscopy, *Rachel, Jakubowski, Tietz, Hegerl and Baumeister* 20 (1986) 305

Thick specimens

A transport equation theory of beam spreading in the electron microscope, *Rez* 12 (1983–84) 29
Grain boundary–solute interactions in polycrystalline silicon and germanium, *Smith, Grovenor, Batson and Wong* 14 (1984) 131

Abstracts/Announcements/Book reviews/ Comments/Editorials/Reports/ Miscellaneous

Abstracts of papers presented at the 17th Annual Scientific Meeting of the Israel Society for Electron Microscopy, Rehovot, Israel, 1983, Ed. *Coleman* 11 (1983) 327
Announcement of coming events 11 (1983) 85
Editorial, *Zeitler* 11 (1983) 1
Editorial, *Kessel* 11 (1983) 2
Editorial, *Zeitler* 11 (1983) 225
Editorial, *Dorset* 11 (1983) 227
Special announcement, NATO Study Institute at Glasgow University 11 (1983) 83
Miscellaneous, New Serials, *Hawkes* 11 (1983) 81
Miscellaneous, Special issues, proceedings, new journals, *Hawkes* 11 (1983) 323
Abstracts of papers presented at 14th Congress of the Italian Society of Electron

Microscopy, Ferrara, Italy 1983, *Ed. Martinelli and Pasquali* 12 (1983–84) 87
Abstracts, Scandinavian Society of Electron Microscopy, Trondheim, 1983, Ed. *Brunk* 12 (1983–84) 265
Special Announcement, EMSA 12 (1983–84) 373
Announcement of coming events 12 (1983–84) 374
Journal of Microscopy list of contents 12 (1983–84) 377
Summary of 1983 Symposium on Electron Crystallography of Macromolecules (reprinted from EMSA Journal), *Chiu* 13 (1984) iv
Symposium on Electron Crystallography of Macromolecules, EMSA, Phoenix, Arizona, August 1983, Ed. *Beer* 13 (1984) 1
Erratum/ Addendum, *Saxton, O'Keefe, Cockayne and Wilkens* 13 (1984) 349
Report on 11th National Conference on Electron Microscopy in the German Democratic Republic, *Heydenreich and Luppa* 13 (1984) 415
SCANDEM-84, Abstracts of the Scandinavian Society for Electron Microscopy, Ed. *Brunk* 13 (1984) 417
Atomic Scale Structure and Properties of Interfaces, Wickenburg, Arizona, 1984, Ed. *Krivanek* 14 (1984) 1
Cryomicroscopy and Radiation Damage II, Schloss Ringberg, 1983, Ed. *Zeitler* 14 (1984) 163
Guest editorial: And the image was simulated, *Marks* 14 (1984) 317
Review: special issues, new serials and many proceedings, *Hawkes* 14 (1984) 367
Abstracts of papers presented at the Festive 18th Scientific Meeting of the Israel Society for Electron Microscopy on the occasion of its 20th anniversary, Nes Ziona, 1984, Ed. *Korn* 14 (1984) 375
Abstracts of papers presented at the Annual Conference of The Netherlands Society of Electron Microscopy, Wageningen, 1983, Ed. *Leene* 14 (1984) 391
Heinz Bethge 65, *Heydenreich* 15 (1984) vii
Abstracts of papers presented at The Netherlands Society for Electron Microscopy and Royal Microscopical Society, Joint Meeting on Image Analysis and Interpretation, Wageningen, November 1984, *Ed. Van der Mast* 15 (1984) 375
Meeting Report: Sir Charles Oatley and the scanning electron microscope, *Hawkes* 16 (1985) 119
Errata 16 (1985) 121
Guest Editorial – EUREM 1984 Symposium on High Resolution Shadowing and Decoration: Image Analysis, *Baumeister* 16 (1985) 285
Special numbers, still proceedings, other novelties, *Hawkes* 17 (1985) 151
Abstracts of papers presented at the 19th Scientific Meeting of the Israel Society for Electron Microscopy, Jerusalem, May 1985, Ed. *Korn* 17 (1985) 157
Selected abstracts from the 38th annual meeting of the Scandinavian Society for Electron Microscopy, SCANDEM-85, Linköping, June 1985, Ed. *Brunk* 17 (1985) 169
Special announcement, Peking meeting 1986 17 (1985) 277
Special issues, proceedings and annuals, *Hawkes* 17 (1985) 393
Report on EMAG '85, *Fryer* 17 (1985) 397
Selected abstracts from the XV Congress of the Italian Society for Electron Microscopy, Rome, May 1985, Eds. *Donelli and Merli* 17 (1985) 399
Introduction and Proceedings of the Centennial Symposium on High Resolution Electron Microscopy, January 1985, Tempe, AZ, Ed. *Buseck* 18 (1985)
The future of high-resolution electron microscopy (summary of panel discussion), *Cowley* 18 (1985) 463
Abstracts of papers presented at the Annual Conference of the Netherlands Society for Electron Microscopy, Wageningen, November 1985, *Eds. Brederoo and de Priester* 19 (1986) 77
Gaston Dupouy: 7 August 1900 – 22 October 1985, *Jouffrey* 19 (1986) 119
Steady progress, special issues, familiar proceedings, *Hawkes* 19 (1986) 303
Abstracts of papers presented at the 20th Scientific Meeting of the Israel Society for Electron Microscopy, *Ed. Sela* 19 (1986) 385
Selected abstracts from the 39th Annual Meeting of the Scandinavian Society for Electron Microscopy, SCANDEM-86, Linnanmaa, Oulu, June 1986, *Ed. Brunk* 19 (1986) 399
